This application contains claims directed to the following patentably distinct species of the claimed invention: the species of printing a pattern on a garment panel using a chemical wherein the chemical includes a color remover, printing a pattern on a garment panel using a chemical wherein the chemical includes a color remover inhibitor, printing a pattern on a garment panel using a chemical wherein the chemical includes a color penetration inhibitor, a printing press configured to print a chemical on a fabric wherein said printing press utilizes a plate to print the chemical, a printing press configured to print a chemical on a fabric wherein said printing press utilizes a roller to print the chemical, a printing press configured to print a chemical on a fabric wherein said printing press utilizes a screen to print the chemical, a printing press configured to print a chemical on a fabric wherein the chemical includes a color remover, and a printing press configured to print a chemical on a fabric wherein said printing press utilizes at least one of a color remover inhibitor and a color penetration inhibitor.

It is noted that a previous requirement for election of species was made on January 21, 2004 between the species defined by a method of manufacturing garments having a vintage appearance and a fabric formed by said method (see claims 1-34 and 61-76), a method of procuring garments having a used appearance (see claims 35-46 and 53-60), and a method of designing a vintage garment (see claims 47-52). In a response filed February 24, 2004, applicant elected the species defined by a method of manufacturing garments having a vintage appearance and a fabric formed by said method and claimed in claims 1-34 and 61-76. Upon further consideration it has been determined that additional patentably distinct species are claimed within claims 1-34

Art Unit: 3765

and 61-76. Accordingly a further election is required in accordance with the instant Office action.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1,2,6-8,10-18,22-27,33,34,61, 64-69,72,73, and 76 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
